SUMMARY

DevOps-focused Computer Engineering student with hands-on experience in AWS, CI/CD, and containerized deployments. Proven ability to build scalable, real-world systems across AI, IoT, and cloud platforms, including award-winning and patent-backed projects.

EDUCATION

Savitribai Phule Pune University	2022 - Present
<i>Bachelor of Engineering, Computer Engineering (Current CGPA 8.8)</i>	<i>Pune, India</i>
Higher Secondary Certificate (HSC) (70%)	2020 - 2022
Indian Certificate of Secondary Education (ICSE) (95%)	2010 - 2020

SKILLS

- **Programming Languages:** Python, Bash, Java, SQL, Kotlin
- **DevOps & Cloud:** Docker, Kubernetes, Ansible, Terraform, AWS, Jenkins, GitHub Actions, Linux, Git, GitHub, Nginx, Kafka
- **AI/ML & Data Analytics:** TensorFlow, Scikit-learn, NumPy, Pandas, OpenCV
- **Database:** MySQL, Firebase
- **Monitoring & Logging:** Prometheus, Grafana
- **Soft Skills:** Problem-Solving, Analytical Thinking, Adaptability, Time Management, Communication

EXPERIENCE

Apptware DevOps Intern	Feb 2025 - May 2025
• Contributed to multiple DevOps projects, supporting CI/CD pipeline setup, infrastructure automation, and cloud migration tasks. • Reduced deployment time by 40% by building CI/CD pipelines with Jenkins, GitHub Actions, and Terraform. • Led AWS cloud migration, improving scalability and lowering costs by 25%. • Managed containerized apps via Docker & Kubernetes for high availability. • Introduced basic monitoring and alerting with Prometheus and Grafana, enabling faster issue response.	
Google Developer Students Club Technical Team Manager	Oct 2023 - Sep 2024
• Led and mentored the technical team in organizing workshops, hackathons, and events to foster hands-on learning. • Organized and conducted beginner-friendly sessions on DevOps tools like Git, Docker, and GitHub.	

PROJECTS

Automated Smart Biogas Plant (International Idea Patent)	Aug 2024 - Dec 2024
• Developed an automated biogas plant system for waste-to-energy conversion and nutrient enrichment. • Developed a Dockerized backend for real-time sensor integration and AI-driven prediction using Flask. • Built CI/CD and infrastructure automation with GitHub Actions, Terraform, and Prometheus for containerized workloads. • Created a mobile app for remote control and predictive maintenance.	
DevOps-Enabled Grape Disease Detection System (AWS + MLOps) GitHub	May 2025
• Built a real-time grape disease system with a ResNet CNN, achieving 98% accuracy, trained and deployed on AWS SageMaker. • Built an end-to-end MLOps pipeline with Docker, GitHub Actions, Terraform for automated training, deployment, and infra provisioning. • Deployed for scalable inference via SageMaker Endpoints, Lambda, and API Gateway, with explainability from Amazon Bedrock. • Delivered a secure, cost-optimized cloud solution with IAM, autoscaling and a Flask-based frontend for real-time user interaction.	
MarketPulse: Real Time Financial Risk Monitoring System (Kafka Docker Jenkins AWS S3) GitHub	Jan 2026
• Built a real-time financial risk detection system using Apache Kafka to stream and analyze live cryptocurrency market data • Applied Isolation Forest–based anomaly detection with consistent feature engineering across streaming and batch pipelines. • Designed a unified ML pipeline supporting offline training, real-time inference, and batch risk analytics with feature parity. • Automated containerized deployment with Docker and Jenkins CI/CD pipelines, persisting trained models and risk metrics in AWS S3.	

ACHIEVEMENTS

- Smart India Hackathon Winner (2024)
- International Idea Patent For Smart Biogas Plant - Application No: TEMP/E-1/115305/2024-MUM
- Student Of The Year Award - NIE Times Of India
- Participated in multiple online and offline hackathons, securing spots in the grand finale of several prestigious events.

CERTIFICATIONS

- Oracle Certified DevOps Professional (2025)
- Oracle Certified Foundations Associate (2025)
